

SENIOR ENVIRONMENTAL LEADER

WHAT DOES A TYPICAL DAY LOOK LIKE FOR YOU?

My role primarily involves ensuring environmental management practices are performed compliantly throughout the organisation. I work closely with all departments across LondonEnergy and with external stakeholders such as the Environment Agency. I support engineering functions and the waste management department to ensure environment improvements are identified and implemented effectively. My main working focus ensures the site manages and remains compliant with all discharges to air/water and land whilst striving for more sustainable practices.

CAREERS TOP TIP:

I would say put time and effort into what you enjoy doing and the industry or job will come to you. There are a vast amount of opportunities within the STEM industry so try to keep an open-mind.

WHAT IS THE BEST BIT ABOUT YOUR JOB?

The best thing about my role is that I have the opportunity to work across all departments.

HOW DID YOU END UP IN THIS ROLE?

For my A-Levels, I studied Maths, Chemistry, and Biology. After being unsure about what to study at university, I chose Chemical Engineering because it offered a mixture of maths and chemistry. The most interesting part of my course was the environmental management component. My course also offered a placement year, which I spent as an environmental coordinator. This experience helped me enter the environmental management sector once I graduated from university.

WHAT WAS YOUR FAVOURITE SUBJECT AT SCHOOL AND WHY?

I've always preferred science-based subjects because there is a systematic approach to finding the answer. Science also offered the opportunity to solve a wide-range of problems.
