

PRODUCT MANAGER

WHAT DOES A TYPICAL DAY LOOK LIKE FOR YOU?

Everyday is different in my role as I oversee the product management on the North London Heat and Power Project. I work across all teams and help collate and integrate disparate pieces of software to help fill the information gaps. This information supports the decision making process as it provides all those involved with robust data. Therefore, I need to oversee that the systems we have in place are all performing their functions correctly.

SUBARNA

CAREERS TOP TIP:

My advice would be to avoid shying away from asking questions as there is no such thing as a silly question. You should always let the curious person shine through as the world has so much to offer.

WHAT IS THE BEST BIT ABOUT YOUR JOB?

I love being able to understand the 'why' to a problem and being challenged with finding the solution.

HOW DID YOU END UP IN THIS ROLE?

I chose to study Engineering at university where I specialised in bioinformatics. I enjoyed being able to use software to look at genetic data to help generate knowledge about a person's DNA. This led me to then pursue a Master's at Imperial College where I also engaged with work on reducing carbon emissions inline with the Sustainable Development Goals. I have always loved data and talking to people so this led me work in consulting after graduating. My desire to have a meaningful role prompted a move to the public health sector and eventually led to my current role.

WHAT WAS YOUR FAVOURITE SUBJECT AT SCHOOL AND WHY?

Growing up, I have always loved science and have been curious about the world around me. I enjoy looking for rational explanations and exploring how everything in the world interacts with one another.
